SAFETY DATA SHEET
according to Regulation (EC) No. 1907/2006

SDS # : A13373

LOW SULFUR FUEL OIL (UN 3082)

Date of the previous version: 2020-07-08  
Revision Date: 2020-07-10  
Version 2

Section 1: IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1. Product identifier

Product name: LOW SULFUR FUEL OIL (UN 3082)
REACH Registration Name: Fuel oil, residual.
REACH registration No: 01-2119474894-22
Substance/mixture: Substance

1.2. Relevant identified uses of the substance or mixture and uses advised against

Identified uses: Manufacture of substances, Distribution of substance, Formulation & (re)packing of substances and mixtures, Use as an intermediate, Fuel used in marine applications: diesel engines and boilers.

1.3. Details of the supplier of the safety data sheet

Supplier: TOTAL MARINE FUELS GLOBAL SOLUTIONS
182 Cecil Street
#27-01 Frasers Tower
Singapore 069547
Tel: +65 6849 5266
Fax: +65 6337 9483

For further information, please contact:

Contact Point: HSE
E-mail Address: rm.mkefr-fds@total.com

1.4. Emergency telephone number

Emergency telephone: +44 1235 239670

See section 16 for additional information

Section 2: HAZARDS IDENTIFICATION

2.1. Classification of the substance or mixture

REGULATION (EC) No 1272/2008
For the full text of the H-Statements mentioned in this Section, see Section 2.2.
SDS #: A13373

LOW SULFUR FUEL OIL (UN 3082)

Revision Date: 2020-07-10
Version 2

Acute inhalation toxicity - dust/mist - Category 4 - (H332)
Carcinogenicity - Category 1B - (H350)
Reproductive toxicity - Category 2 - (H361d)
Specific target organ toxicity (repeated exposure) - Category 2 - (H373)
Acute aquatic toxicity - Category 1 - (H400)
Chronic aquatic toxicity - Category 1 - (H410)

2.2. Label elements

Labelled according to
REGULATION (EC) No 1272/2008

Contains Fuel oil, residual

EC-No 270-675-6

Signal word
DANGER

Hazard Statements
H332 - Harmful if inhaled
H350 - May cause cancer
H361d - Suspected of damaging the unborn child
H373 - May cause damage to organs through prolonged or repeated exposure
H410 - Very toxic to aquatic life with long lasting effects

Precautionary Statements
P201 - Obtain special instructions before use
P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking
P243 - Take precautionary measures against static discharge
P250 - Do not breathe dust/fume/gas/mist/vapors/spray
P280 - Wear protective gloves/protective clothing/eye protection/face protection
P303 + P361 + P353 - IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower
P304 + P340 - IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
P314 - Get medical advice/attention if you feel unwell
P403 + P233 - Store in a well-ventilated place. Keep container tightly closed
P273 - Avoid release to the environment
P501 - Dispose of contents/ container to an approved waste disposal plant

Supplemental Hazard Statements
EUH066 - Repeated exposure may cause skin dryness or cracking
2.3. Other hazards

Physical-Chemical Properties
In the presence of hot spots, there is a special risk of fire or explosion under certain conditions involving accidental release of vapor or leaks of product under pressure.

Properties Affecting Health
Contact with hot product will cause thermal burns. Vapors or mists are irritating for mucous membranes, notably in the eyes. Hydrogen sulphide can accumulate in the head space of storage tanks containing this product and can reach potentially hazardous concentrations.

Section 3: COMPOSITION/INFORMATION ON INGREDIENTS

3.1. Substance
A complex and variable combination of paraffinic, cyclic and aromatic hydrocarbons having a carbon number range predominantly of C15 to C50 and boiling in the range of approximately 150°C to 750°C. They may contain sulphurated derivatives and organic acids. This product contains polycyclic aromatic hydrocarbons (PAH), some of which are considered carcinogens.

Additional information
Sulphur: < 0.5%.
Hydrogen sulphide can accumulate in the head space of storage tanks containing this product and can reach potentially hazardous concentrations.

For the full text of the H-Statements mentioned in this Section, see Section 16.

Section 4: FIRST AID MEASURES

4.1. Description of first-aid measures

General advice
IN CASE OF SERIOUS OR PERSISTENT CONDITIONS, CALL A DOCTOR OR EMERGENCY MEDICAL CARE.
If there is any suspicion of inhalation of H2S. Rescuers must wear breathing apparatus, belt and safety rope, and follow rescue procedures.

Eye contact
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
If irritation, blurred vision or swelling occurs and persists. Obtain medical advice from a specialist.
In case of contact with the hot product, COOL THE EYE IMMEDIATELY AND COPIOUSLY WITH COLD WATER for 10 minutes, keeping the eye open if possible. Take the person to
Skin contact

Immediately remove all stained or splashed clothing that is not adhering to the skin. Remove as much as possible by wiping. If necessary, use a fatty substance of animal or vegetable origin. Never use gasoline, kerosene or other solvents for washing of contaminated skin. Wash affected area with soap and water. Seek medical attention if skin irritation, swelling or redness develops and persists.

When using high-pressure equipment, injection of product can occur. If high-pressure injuries occur, immediately seek professional medical attention.

For minor thermal burns. Hold the burned area under cold running water for at least five minutes, or until the pain subsides. Do not puncture blisters. DO NOT attempt to remove portions of clothing glued to burnt skin but cut round them.

Seek medical attention in all cases of serious burns. In this case, the casualty should be sent immediately to hospital.

Inhalation

In case of exposure to intense concentrations of vapours, fumes or spray, transport the person away from the contaminated zone, keep warm and allow to rest. Immediately begin artificial respiration if breathing has ceased. Call a physician immediately.

If there is any suspicion of inhalation of H2S. Rescuers must wear breathing apparatus, belt and safety rope, and follow rescue procedures. If not breathing, give artificial respiration. Provision of oxygen may help. Remove casualty to fresh air as quickly as possible.

Ingestion

Do NOT induce vomiting. Give nothing to drink. Never give anything by mouth to an unconscious person.

Consult a physician.

Protection of First-aiders

CAUTION! First aid personnel must be aware of personal risk during rescue!. Use personal protective equipment. See Section 8 for more detail.

4.2. Most important symptoms and effects, both acute and delayed

Eye contact

Burning feeling and temporary redness. Risk of burns (if the product is hot). Vapor may cause irritation.

Skin contact

Risk of burns (if the product is hot). Prolonged or repeated contact may dry skin and cause irritation.

Inhalation

Inhalation of vapors in high concentration may cause irritation of respiratory system. Causes headache, drowsiness or other effects to the central nervous system. Risk of hydrogen sulphide intoxication (H2S).

Ingestion

Not an expected route of exposure. Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

4.3. Indication of any immediate medical attention and special treatment needed

Notes to physician

Treat symptomatically.

In the case of thermal burns. DO NOT attempt to remove portions of clothing glued to burnt skin but cut round them.
Section 5: FIRE-FIGHTING MEASURES

5.1. Extinguishing media

Suitable Extinguishing Media
Extinguishing media - large fires: Foam (specifically trained person only). Water fog (trained personnel only).
Extinguishing media - small fires: Carbon dioxide (CO₂). Dry powder. Sand or earth. Other inert gases (subject to regulations).

Unsuitable Extinguishing Media
Do not use direct water jets on the burning product. They could cause splattering and spread the fire.
Simultaneous use of foam and water on the same surface is to be avoided as water destroys the foam.

5.2. Special hazards arising from the substance or mixture

Special Hazard
Incomplete combustion is likely to give rise to a complex mixture of airborne solid and liquid particulates, gases, including carbon monoxide. Unidentified organic and inorganic compounds.
If sulphur compounds are present in appreciable amounts, combustion products may include also H₂S and SOₓ (sulfur oxides) or sulfuric acid.

5.3. Advice for fire-fighters

Special protective equipment for fire-fighters
In case of a large fire or in confined or poorly ventilated spaces, wear full fire resistant protective clothing and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Other information
Do not allow run-off from fire fighting to enter drains or water courses.

Section 6: ACCIDENTAL RELEASE MEASURES

6.1. Personal precautions, protective equipment and emergency procedures

General Information
Except in case of small spillages, the feasibility of any actions should always be assessed and advised, if possible, by a trained, competent person in charge of managing the emergency.
If required, notify relevant authorities according to all applicable regulations.
When the presence of dangerous amounts of H₂S around the spilled product is suspected or proved, additional or special actions may be warranted to determine controls appropriate to local circumstances.
Evacuate non-essential personnel. Avoid direct contact with released material. Stop or contain leak at the source, if safe to do so.
Avoid contact with skin, eyes and inhalation of vapors. ELIMINATE all ignition sources (no smoking, flares, sparks or flames in immediate area). Ensure adequate ventilation, especially in confined areas.
For personal protection see section 8.

Advice for non-emergency personnel
Do not touch or walk through spilled material. Evacuate personnel to safe areas. Ensure adequate ventilation. For personal protection see section 8.
Advice for emergency responders

Ensure the application of strict rules of hygiene by the personnel exposed to the risk of contact with the product. Use personal protective equipment.
In case of:
Small spillages: normal antistatic working clothes are usually adequate. For personal protection see section 8.
Large spillages: full body suit of chemically resistant and antistatic material. Work gloves (preferably gauntlets) providing adequate chemical resistance. Remarks: Gloves made of PVA are not water-resistant, and are not suitable for emergency use. If contact with hot product is possible or anticipated, gloves should be heat-resistant and thermally insulated.
Work helmet. Antistatic non-skid safety shoes or boots, if necessary heat-resistant.
Goggles and/or face shield, if splashes or contact with eyes is possible or anticipated.
A half or full-face respirator with filter(s) for organic vapours (and when applicable: for H2S). If the situation cannot be completely assessed, or if an oxygen deficiency is possible, only SCBA’s should be used.

6.2. Environmental precautions

General Information
The product should not be allowed to enter drains, water courses or the soil. Solidified product may clog drains and sewers. If necessary, consult an expert. Local authorities should be advised if significant spillages cannot be contained.

6.3. Methods and material for containment and cleaning up

Methods for containment
control the spreading of the spillage. Contain and collect spillage with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see Section 13). Ensure adequate ventilation, especially in confined areas. Large spillages may be cautiously covered with foam, if available, to limit fire risk.

Methods for cleaning up
Let hot product cool down naturally. Collect free product with suitable means. Use mechanical means such as pumps, skimmers and absorbent materials, Pick up and transfer to properly labeled containers. Cleaning with high pressure washers, or, Wash off with warm water. Wear respiratory protection.
In case of soil contamination, remove contaminated soil for remediation or disposal, in accordance with local regulations. Transfer recovered product and other materials to suitable tanks or containers and store/dispose according to relevant regulations.
In case of spillage in the water:
Product less dense than water. In case of small spillages in closed waters, contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents, control the spreading of the spillage.
If possible, large spillages in open waters should be contained with floating barriers or other mechanical means. Collect product by skimming or other suitable mechanical means. The use of dispersants should be advised by an expert, and, if required, approved by local authorities. Collect recovered product and other materials in suitable tanks or containers for recovery or safe disposal.
Product which is denser than water will sink to the bottom, and usually no intervention will be feasible. If possible, collect the product and contaminated materials with mechanical means, and store/dispose of according to relevant regulations. In special situations (to be assessed on case-by-case basis, according to expert judgement and local conditions), excavations of trenches on the bottom to collect the product, or burying the product with sand may be a feasible option.
6.4. Reference to other sections

Personal Protective Equipment  See Section 8 for more detail.

Waste treatment  See section 13.

Other information  Recommended measures are based on the most likely spillage scenarios for this material. However, local conditions (wind, air temperature, wave/current direction and speed) may significantly influence the choice of appropriate actions. For this reason, local experts should be consulted when necessary. Local regulations may also prescribe or limit actions to be taken. Cut off the electric power supply if this operation causes no sparks in the area containing vapors from the product. Concentration of H2S in tank headspaces may reach hazardous values, especially in case of prolonged storage. This situation is especially relevant for those operations which involve direct exposure to the vapours in the tank. Spillages of limited amounts of products, especially in the open air when vapours will be usually quickly dispersed, are dynamic situations, which presumably do not entail exposure to dangerous concentrations. As H2S has a density greater than ambient air, a possible exception may regard the build-up of dangerous concentrations in specific spots, like trenches, depressions or confined spaces. In all these circumstances, however, the correct actions should be assessed on a case-by-case basis.

Section 7: HANDLING AND STORAGE

7.1. Precautions for safe handling

Advice on safe handling  Handle in accordance with good industrial hygiene and safety practice. Hydrogen sulphide can accumulate in the head space of storage tanks containing this product and can reach potentially hazardous concentrations. Wear personal protective equipment. Refer to Section 8. Take precautionary measures against static electricity. The inspection, cleaning and maintenance of storage containers require the application of strict procedures and must be entrusted to qualified personnel (internal or external). Avoid splash filling of bulk volumes when handling hot liquid product. Keep the temperature of the product as low as possible to minimise the release of fumes. Never check the tank level by using a naked flame. Do not smoke. Avoid breathing vapors or mists. Ensure adequate ventilation. Vapors may form explosive mixtures with air. Avoid contact with skin, eyes and clothing. Wear suitable protective clothing. Do not use compressed air for filling, discharging, or handling operations.

Technical measures  Prevent the formation of vapors, mists and aerosols. Ensure adequate ventilation. Do not use compressed air for filling, discharging, or handling operations. Design installations to avoid spills and splashes of hot product. Take all necessary precautions to prevent water from entering the containers, tanks, transfer lines etc... Keep away from food, drink and animal feedingstuffs.

Prevention of fire and explosion  Adjust storage temperature to the lowest possible, whilst ensuring that it is maintained at greater than the 10 °C pour point, AND DOES NOT EXCEED 70 °C. NEVER heat a reservoir or tank if the heating elements are not adequately immersed (minimum 15 cm).
Take precautionary measures against static discharges. Ground/bond containers, tanks and transfer/receiving equipment. Never weld any container or empty pipe that has not been degassed.
Do not heat the pumps or pipes using an open flame.

Hygiene measures
Ensure the application of strict rules of hygiene by the personnel exposed to the risk of contact with the product. Avoid contact with skin, eyes and clothing. Use personal protective equipment as required.
Remove as much as possible by wiping. If small amount of product only comes into contact with the skin, remove with vegetable oil. White oil, lukewarm paraffin or a suitable soap recommended for this purpose may also be used.
Do not use abrasives, solvents or fuels.
Do not put product contaminated rags into workwear pockets.
Do not eat, drink or smoke when using this product. Change contaminated clothes at the end of working shift. Wash hands before breaks and immediately after handling the product.
Gloves must be periodically inspected and changed in case of wear, perforations or contaminations. Avoid breathing vapors, mist or gas.

7.2. Conditions for safe storage, including any incompatibilities

Technical measures/Storage conditions
Storage area layout, tank design, equipment and operating procedures must comply with the relevant European, national or local legislation.
. Before entering storage tanks and commencing any operation in a confined area, check the atmosphere for oxygen content and flammability. If sulphur compounds are suspected to be present in the product, check the atmosphere for H2S content. Use adequate personal protective equipment as needed.
. Take precautionary measures against static discharges. Ensure all equipment is electrically grounded before beginning transfer operations. Storage installations should be designed with adequate bunds so as to prevent ground or water pollution in case of leaks or spills. Do not remove the hazard labels of the containers (even if they are empty). Store the packed products (drums, samples, cans ...) in properly ventilated rooms, away from damp, heat and any potential source of ignition. Lines used for the product and pump devices are to be insulated and equipped with a heating device.
. Keep containers tightly closed and properly labelled. Keep preferably in the original container. Otherwise reproduce all indication of the regulation label on the new container. Store separately from oxidising agents.
. Do not weld, solder, drill, cut or incinerate empty containers, unless they have been properly cleaned. Empty containers may contain combustible product residues.
. Store in accordance with the particular national regulations.

Materials to Avoid
Strong oxidizing agents, Strong acids, Halogens.

Packaging material
Use only containers, seals, pipes, etc... made in a material suitable for use with aromatic hydrocarbons. heat resistant. Recommended materials for containers, or container linings use mild steel, stainless steel. Some synthetic materials may be unsuitable for containers or container linings depending on the material specification and intended use. Compatibility should be checked with the manufacturer.

Further information
Ensure that all relevant regulations regarding handling and storage facilities of flammable products are followed.

7.3. Specific end uses
Specific use(s)  
See exposure scenarios.

Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.2. Exposure controls

Occupational Exposure Controls

Engineering Measures

Ensure adequate ventilation. Do not enter empty storage tanks until measurements of available oxygen have been carried out. When working in confined spaces (tanks, containers, etc.), ensure that there is a supply of air suitable for breathing and wear the recommended equipment.

Personal Protective Equipment

General Information

Protective engineering solutions should be implemented and in use before personal protective equipment is considered. Use personal protective equipment in good condition.

Respiratory protection

Do not breathe vapors, mist or gas.

When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Breathing apparatus with filter, Type A.

The use of breathing apparatus must comply strictly with the manufacturer’s instructions and the regulations governing their choices and uses.
Eye Protection
Wear safety glasses with side shields (or goggles). Face-shield.

Skin and body protection
Wear suitable protective clothing. hydrocarbon-proof clothing. Protective shoes or boots.

Hand Protection
. Wear suitable gloves tested to EN374.
. Gloves anti-heat for the liquefied product (EN 407, level 1).
. Please observe the instructions regarding permeability and breakthrough time which are provided by the supplier of the gloves. Also take into consideration the specific local conditions under which the product is used, such as the danger of cuts, abrasion, and the contact time.

Environmental exposure controls

General Information
The product should not be allowed to enter drains, water courses or the soil.

Section 10: STABILITY AND REACTIVITY

10.1. Reactivity

General Information
No information available.

10.2. Chemical stability

Stability
Stable under recommended storage conditions.

10.3. Possibility of hazardous reactions

Hazardous Reactions
None under normal processing.

10.4. Conditions to avoid

Conditions to avoid
Take precautionary measures against static discharges. Keep away from open flames, hot surfaces and sources of ignition.

10.5. Incompatible materials

Materials to Avoid
Strong oxidizing agents, Strong acids, Halogens.

10.6. Hazardous Decomposition Products

Hazardous Decomposition Products
None under normal use.

Section 11: TOXICOLOGICAL INFORMATION

11.1. Information on toxicological effects

Acute toxicity  Local effects  Product Information

Skin contact
This substance does not meet the EU criteria for classification. Risk of burns (if the product is hot). Prolonged or repeated contact may dry skin and cause irritation.

Eye contact
This substance does not meet the EU criteria for classification. Burning feeling and temporary redness. Risk of burns (if the product is hot).
Vapor may cause irritation.

**Inhalation**

Inhalation of vapors in high concentration may cause irritation of respiratory system. Causes headache, drowsiness or other effects to the central nervous system. Risk of hydrogen sulphide intoxication (H2S).

**Ingestion**

This substance does not meet the EU criteria for classification. Not an expected route of exposure. Ingestion may cause gastrointestinal irritation, nausea, vomiting and diarrhea.

**ATEmix (inhalation-dust/mist)** 4.10 mg/l

### Acute toxicity - Component Information

#### Repeated dose toxicity

**Target Organ Effects (STOT)**

**Specific target organ systemic toxicity (single exposure)**

This substance does not meet the EU criteria for classification.

**Specific target organ systemic toxicity (repeated exposure)**

May cause damage to organs through prolonged or repeated exposure. Target Organs: Blood. Thymus. Liver. Repeated exposure may cause skin dryness or cracking.

**Aspiration toxicity**

This substance does not meet the EU criteria for classification.

#### Other information

No information available.
Section 12: ECOLOGICAL INFORMATION

12.1. Toxicty

Very toxic to aquatic life with long lasting effects.

</table>
Given its physical and chemical characteristics, the product generally shows low soil mobility.

Loss by evaporation is limited.

The product floats or settles, depending on its density.

### 12.5. Results of PBT and vPvB assessment

This product contains no substance considered as PBT and/or vPvB according to REACH regulation annex XIII criteria.

### 12.6. Other adverse effects

No information available.

### Section 13: DISPOSAL CONSIDERATIONS

#### 13.1. Waste treatment methods

- **Waste from Residues / Unused Products**: Dispose of in accordance with the European Directives on waste and hazardous waste. Dispose of contents/ container to an approved incineration plant.

- **Contaminated packaging**: Empty containers should be taken to an approved waste handling site for recycling or disposal.

- **EWC Waste Disposal No.**: According to the European Waste Catalogue, Waste Codes are not product specific, but application specific. Waste codes should be assigned by the user based on the application for which the product was used.

### Section 14: TRANSPORT INFORMATION

#### ADR/RID

- **UN/ID No**: UN3082
- **Proper shipping name**: ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S.
- **Hazard class**: 9
- **Packing Group**: III
- **ADR/RID-Labels**: 9
- **Environmental hazard**: Yes

**Section 15: REGULATORY INFORMATION**
15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture

European Union

REACH
This substance has been registered according to Regulation (EU) No. 1907/2006 (REACH).

International Inventories

The substance is listed or exempted from listing in the following inventories:
- Australia (AICS)
- Canada (DSL/NDSL)
- China (IECSC)
- Europe (EINECS/ELINCS/NLP)
- New Zealand (NZIoC)
- Taiwan (TCSI)
- U.S.A. (TSCA)

Further information

No information available

15.2. Chemical Safety Assessment

Chemical Safety Assessment
A Chemical Safety Assessment has been carried out for this substance

Section 16: OTHER INFORMATION

Full text of H-Statements referred to under sections 2 and 3
H350 - May cause cancer
H361d - Suspected of damaging the unborn child
H332 - Harmful if inhaled
H373 - May cause damage to organs through prolonged or repeated exposure
H400 - Very toxic to aquatic life
H410 - Very toxic to aquatic life with long lasting effects

Abbreviations, acronyms
ACGIH = American Conference of Governmental Industrial Hygienists
bw = body weight
bw/day = body weight/day
EC x = Effect Concentration associated with x% response
GLP = Good Laboratory Practice
IARC = International Agency for Research of Cancer
LC50 = 50% Lethal concentration - Concentration of a chemical in air or a chemical in water which causes the death of 50% (one half) of a group of test animals
LD50 = 50% Lethal Dose - Chemical amount, given at once, which causes the death of 50% (one half) of a group of test animals
LL = Lethal Loading
NIOSH = National Institute of Occupational Safety and Health
NOAEL = No Observed Adverse Effect Level
NOEC = No Observed Effect Concentration
SDS # : A13373

LOW SULFUR FUEL OIL (UN 3082)

Revision Date: 2020-07-10

Legend  Section 8

OEL = Occupational Exposure Limit
TWA: Time Weight Average
STEL: Short Time Exposure Limit
PEL: Permissible exposure limit
REL: Recommended exposure limit
TLV: Threshold Limit Values

Revision Note  Name change. (M)SDS sections updated: 1.

This safety data sheet complies with the requirements of Regulation (EC) No. 1907/2006

This safety data sheet serves to complete but not to replace the technical product sheets. The information contained herein is given in good faith and is accurate to the best of knowledge at the date indicated above. It is understood by the user that any use of the product for purposes other than those for which it was designed entails potential risk. The information given herein in no way dispenses the user from knowing and applying all provisions regulating his activity. The user bears sole liability for the precautions required when using the product. The regulatory texts indicated herein are intended to aid the user to fulfil his obligations. This list is not to be considered complete and exhaustive. It is the user's responsibility to ensure that he is subject to no other obligations than those mentioned.

End of the Safety Data Sheet
1. Exposure scenario

Manufacture of substances, Industrial.

Use Descriptor
Sector of use
SU3 - Industrial Manufacturing (all)
SU8 - Manufacture of bulk, large scale chemicals (including petroleum products)
SU9 - Manufacture of fine chemicals

Process category
PROC1 - Use in closed process, no likelihood of exposure
PROC2 - Use in closed, continuous process with occasional controlled exposure
PROC3 - Use in closed batch process (synthesis or formulation)
PROC8a - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities
PROC8b - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities
PROC15 - Use as laboratory reagent

Environmental Release Category
ERC1 - Manufacture of substances
ERC4 - Industrial use of processing aids in processes and products, not becoming part of articles

Specific Environmental Release Category
ESVOC SpERC 1.1.v1.

Processes, tasks, activities covered
Manufacture of the substance or use as a process chemical or extraction agent within closed or contained systems. Includes incidental exposures during recycling/ recovery, material transfers, storage, sampling, associated laboratory activities, maintenance and loading (including marine vessel/barge, road/rail car and bulk container).

2. Operational conditions and risk management measures

2.1. Control of environmental exposure

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Amounts used:
Fraction of EU tonnage used in region: 0.1
Regional use tonnage (tonnes/year): 1.1E+7
Fraction of Regional tonnage used locally: 5.2E-2
Annual site tonnage (tonnes/year): 6.0E+5
Maximum daily site tonnage (kg/day): 2.0E+6

Frequency and duration of use
Continuous release
Emission Days (days/year): 300

Environment factors not influenced by risk management:
Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Other operational conditions of use affecting environmental exposure:
Release fraction to air from process (initial release prior to RMM): 1.0E-4
Release fraction to wastewater from process (initial release prior to RMM): 3.0E-6
Release fraction to soil from process (initial release prior to RMM): 0.0001

Technical conditions and measures at process level to prevent release
Common practices vary across sites thus conservative process release estimates used.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil
Risk from environmental exposure is driven by humans via indirect exposure
Onsite wastewater treatment required
Prevent discharge of undissolved substance to or recover from onsite wastewater

Treat air emissions to provide a typical removal efficiency of (%): 90
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of (%): >=85.9
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%): >=0

Organizational measures to prevent/limit release from the site
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to municipal sewage treatment plant:
Estimated substance removal from wastewater via domestic sewage treatment (%): 88.8
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): 88.8
Maximum allowable site tonnage (MSafe) (kg/d): 2.3E+6
Assumed domestic sewage treatment plant flow (m3/d): 10000

Conditions and measures related to external treatment of waste for disposal
During manufacturing no waste of the substance is generated.

Conditions and measures related to external recovery of waste
During manufacturing no waste of the substance is generated.

Remarks
Additional information on the basis for the allocation of the identified OCs (operating conditions) and RMMs (Risk Management Measures) is contained in Petrorisk file

2.2. Control of exposure - Workers / Consumers

Product characteristics
Physical State
Liquid, vapor pressure < 0.5 kPa at STP

Concentration of substance in product
Covers percentage substance in the product up to 100 % (unless stated differently).

Amounts used
Not applicable.

Frequency and duration of use
Covers daily exposures up to 8 hours (unless stated differently)

Human factors not influenced by risk management
not applicable

Other operational conditions affecting exposure
Operation is carried out at elevated temperature (> 20°C above ambient temperature). Assumes a good basic standard of occupational hygiene is implemented.
2.2a. Control of worker exposure

<table>
<thead>
<tr>
<th>Contributing Scenarios</th>
<th>Operational conditions and risk management measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>General measures (carcinogens)</td>
<td>Consider technical advances and process upgrades (including automation) for the elimination of releases. Minimize exposure using measures such as closed systems, dedicated facilities and suitable general/local exhaust ventilation. Drain down systems and clear transfer lines prior to breaking containment. Clean/flush equipment, where possible, prior to maintenance. Where there is potential for exposure: restrict access to authorized persons; provide specific activity training to operators to minimize exposures; wear suitable gloves and coveralls to prevent skin contamination; wear respiratory protection when its use is identified for certain contributing scenarios; clean up spills immediately and dispose of wastes safely. Ensure safe systems of work or equivalent arrangements are in place to manage risks. Regularly inspect, test and maintain all control measures. Consider the need for risk based health surveillance.</td>
</tr>
<tr>
<td>General exposures (closed systems)</td>
<td>Handle substance within a closed system. Wear chemically resistant gloves (tested to EN374) in combination with ‘basic’ employee training.</td>
</tr>
<tr>
<td>Process sampling Outdoor</td>
<td>Sample via a closed loop or other system to avoid exposure. Avoid carrying out activities involving exposure for more than 15 minutes. Wear chemically resistant gloves (tested to EN374) in combination with ‘basic’ employee training.</td>
</tr>
<tr>
<td>Bulk product storage</td>
<td>Store substance within a closed system. Avoid carrying out activities involving exposure for more than 4 hours. Wear chemically resistant gloves (tested to EN374) in combination with ‘basic’ employee training.</td>
</tr>
<tr>
<td>Laboratory activities</td>
<td>Handle within a fume cupboard or implement suitable equivalent methods to minimize exposure. Wear suitable gloves tested to EN374.</td>
</tr>
<tr>
<td>Marine vessel/barge (un)loading</td>
<td>Avoid carrying out activities involving exposure for more than 4 hours. Transfer via enclosed lines. Clear transfer lines prior to de-coupling. Retain drain downs in sealed storage pending disposal or for subsequent recycle. Wear chemically resistant gloves (tested to EN374) in combination with ‘basic’ employee training.</td>
</tr>
<tr>
<td>Road tanker/rail car loading</td>
<td>Ensure material transfers are under containment or extract ventilation. Wear chemically resistant gloves (tested to EN374) in combination with ‘basic’ employee training.</td>

<tbody>
<tr>
<td>Not applicable</td>
<td></td>
</tr>
</tbody>
</table>

3. Exposure estimation and references

Health
The ECETOC TRA tool has been used to estimate consumer exposures unless otherwise indicated

Environment
The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.
4. Guidance for Downstream User to check compliance with the Exposure scenario

**Health**
Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not enable the derivation of a DNEL for carcinogenic effects. Available hazard data do not support the need for a DNEL to be established for other health effects. Risk Management Measures are based on qualitative risk characterization.

**Environment**
Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).
1. Exposure scenario

Use as an intermediate, Industrial.

Use Descriptor
Sector of use
SU3 - Industrial Manufacturing (all)
SU8 - Manufacture of bulk, large scale chemicals (including petroleum products)
SU9 - Manufacture of fine chemicals

Process category
PROC1 - Use in closed process, no likelihood of exposure
PROC2 - Use in closed, continuous process with occasional controlled exposure
PROC3 - Use in closed batch process (synthesis or formulation)
PROC8a - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities
PROC8b - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities
PROC15 - Use as laboratory reagent

Environmental Release Category
ERC6a - Industrial use resulting in manufacture of another substance (use of intermediates)

Specific Environmental Release Category

Processes, tasks, activities covered
Use of substance as an intermediate within closed or contained systems (not related to Strictly Controlled Conditions). Includes incidental exposures during recycling/ recovery, material transfers, storage, sampling, associated laboratory activities, maintenance and loading (including marine vessel/barge, road/rail car and bulk container).

2. Operational conditions and risk management measures

2.1. Control of environmental exposure

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Amounts used:
Fraction of EU tonnage used in region: 0.1
Regional use tonnage (tonnes/year): 1.3E+5
Fraction of Regional tonnage used locally: 1.2E-1
Annual site tonnage (tonnes/year): 1.5E+4
Maximum daily site tonnage (kg/day): 5.0E+4

Frequency and duration of use
Continuous release
Emission Days (days/year): 300

Environment factors not influenced by risk management
Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Other operational conditions of use affecting environmental exposure
Release fraction to air from process (initial release prior to RMM): 1.0E-5
Release fraction to wastewater from process (initial release prior to RMM): 1.0E-5
Release fraction to soil from process (initial release prior to RMM): 0.001
Technical conditions and measures at process level to prevent release
Common practices vary across sites thus conservative process release estimates used.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil
Risk from environmental exposure is driven by freshwater sediment
If discharging to domestic sewage treatment plant, no onsite wastewater treatment required
Prevent discharge of undissolved substance to or recover from onsite wastewater
Treat air emission to provide a typical removal efficiency of (%) : 80
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of (%) : >=54.0
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) : >=0

Organizational measures to prevent/limit release from the site
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to municipal sewage treatment plant

Estimated substance removal from wastewater via domestic sewage treatment (%) : 88.8
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%) : 88.8
Maximum allowable site tonnage (MSafe) (kg/d) : 1.9E+5
Assumed domestic sewage treatment plant flow (m3/d) : 2000

Conditions and measures related to external treatment of waste for disposal
This substance is consumed during use and no waste of the substance is generated.

Conditions and measures related to external recovery of waste
This substance is consumed during use and no waste of the substance is generated.

Remarks
Additional information on the basis for the allocation of the identified OCs (operating conditions) and RMMs (Risk Management Measures) is contained in Petrorisk file

2.2. Control of exposure - Workers / Consumers

Product characteristics
Physical State
Liquid, vapor pressure < 0.5 kPa at STP

Concentration of substance in product
Covers percentage substance in the product up to 100 % (unless stated differently).

Amounts used
Not applicable.
Frequency and duration of use
Covers daily exposures up to 8 hours (unless stated differently)

Human factors not influenced by risk management
not applicable

Other operational conditions affecting exposure
Operation is carried out at elevated temperature (> 20°C above ambient temperature). Assumes a good basic standard of occupational hygiene is implemented.

ERC1 - Manufacture of substances
ERC2 - Formulation of preparations
ERC3 - Formulation in materials
ERC4 - Industrial use of processing aids in processes and products, not becoming part of articles
ERC5 - Industrial use resulting in inclusion into or onto a matrix
ERC6a - Industrial use resulting in manufacture of another substance (use of intermediates)
ERC6b - Industrial use of reactive processing aids
ERC6c - Industrial use of monomers for manufacture of thermoplastics
ERC6d - Industrial use of process regulators for polymerization processes in production of resins, rubbers, polymers
ERC7 - Industrial use of substances in closed systems

Specific Environmental Release Category
ESVOC SpERC 1.1b. v1.

Processes, tasks, activities covered
Bulk loading (including marine vessel/barge, rail/road car and IBC loading) of substance within closed or contained systems, including incidental exposures during its sampling, storage, unloading, maintenance and associated laboratory activities.

2. Operational conditions and risk management measures

2.1. Control of environmental exposure

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Fraction of EU tonnage used in region: 0.1
Regional use tonnage (tonnes/year): 1.1E+7
Fraction of Regional tonnage used locally: 2.0E-3
Annual site tonnage (tonnes/year): 2.3E+4
Maximum daily site tonnage (kg/day): 7.7E+4

Frequency and duration of use Continuous release
Emission Days (days/year): 300

Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Release fraction to air from process (initial release prior to RMM): 1.0E-4
Release fraction to wastewater from process (initial release prior to RMM): 1.0E-7
Release fraction to soil from process (initial release prior to RMM): 0.00001

Technical conditions and measures at process level to prevent release
Common practices vary across sites thus conservative process release estimates used.
Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil
Risk from environmental exposure is driven by humans via indirect exposure
No wastewater treatment required

Treat air emission to provide a typical removal efficiency of (%) : 90
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of (%) : >= 0
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) : >= 0

Organizational measures to prevent/limit release from the site
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Estimated substance removal from wastewater via domestic sewage treatment (%): 88.8
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): 88.8
Maximum allowable site tonnage (MSafe) (kg/d): 3.8E+5
Assumed domestic sewage treatment plant flow (m³/d): 2000

Conditions and measures related to external treatment of waste for disposal
External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste
External recovery and recycling of waste should comply with applicable local and/or national regulations.

Remarks
Additional information on the basis for the allocation of the identified OCs (operating conditions) and RMMs (Risk Management Measures) is contained in Petrorisk file

### 2.2. Control of exposure - Workers / Consumers

**Product characteristics**

### 3. Exposure estimation and references
Health
The ECETOC TRA tool has been used to estimate consumer exposures unless otherwise indicated.

Environment
The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model.

4. Guidance for Downstream User to check compliance with the Exposure scenario

Health
Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. Available hazard data do not enable the derivation of a DNEL for carcinogenic effects. Available hazard data do not support the need for a DNEL to be established for other health effects. Risk Management Measures are based on qualitative risk characterization.

Environment
Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using on-site technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).
1. Exposure scenario

Formulation & (re)packing of substances and mixtures, Industrial.

Use Descriptor
Sector of use
SU3 - Industrial Manufacturing (all)
SU10 - Formulation [mixing] of preparations and/or re-packaging (excluding alloys)

Process category
PROC1 - Use in closed process, no likelihood of exposure
PROC2 - Use in closed, continuous process with occasional controlled exposure
PROC3 - Use in closed batch process (synthesis or formulation)
PROC8a - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities
PROC8b - Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities
PROC15 - Use as laboratory reagent

Environmental Release Category
ERC2 - Formulation of preparations

Specific Environmental Release Category
ESVOC SpERC 2.2.v1.

Processes, tasks, activities covered
Formulation of the substance and its mixtures in batch or continuous operations within closed or contained systems, including incidental exposures during storage, materials transfers, mixing, maintenance, sampling and associated laboratory activities.

2. Operational conditions and risk management measures

2.1. Control of environmental exposure

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Fraction of EU tonnage used in region: 0.1
Regional use tonnage (tonnes/year): 1.1E+7
Fraction of Regional tonnage used locally: 2.6E-3
Annual site tonnage (tonnes/year): 3.0E+4
Maximum daily site tonnage (kg/day): 1.0E+5

Frequency and duration of use Continuous release
Emission Days (days/year): 300
Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Release fraction to air from process (initial release prior to RMM): 2.2E-3
Release fraction to wastewater from process (initial release prior to RMM): 5.0E-6
Release fraction to soil from process (initial release prior to RMM): 0.0001

Technical conditions and measures at process level to prevent release
Common practices vary across sites thus conservative process release estimates used.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil
Risk from environmental exposure is driven by humans via indirect exposure
If discharging to domestic sewage treatment plant, no onsite wastewater treatment required
Prevent discharge of undissolved substance to or recover from onsite wastewater

Treat air emission to provide a typical removal efficiency of (%): 0
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of (%): >=54
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%)$: \geq 0$

**Organizational measures to prevent/limit release from the site**
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Estimated substance removal from wastewater via domestic sewage treatment (%): 88.8
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): 88.8
Maximum allowable site tonnage (MSafe) (kg/d): 1.1E+5
Assumed domestic sewage treatment plant flow (m3/d): 2000

**Conditions and measures related to external treatment of waste for disposal**
External treatment and disposal of waste should comply with applicable local and/or national regulations.

**Conditions and measures related to external recovery of waste**
External recovery and recycling of waste should comply with applicable local and/or national regulations.

**Remarks**
Additional information on the basis for the allocation of the identified OCs (operating conditions) and RMMs (Risk Management Measures) is contained in Petrorisk file

---

### 2.2. Control of exposure - Workers / Consumers

**Product characteristics**
**Physical State**
Liquid, vapor pressure $< 0.5$ kPa at STP

**Concentration of substance in product**
Covers percentage substance in the product up to 100 % (unless stated differently).

**Frequency and duration of use**
Covers daily exposures up to 8 hours (unless stated differently)

**Other operational conditions affecting exposure**
Assumes use at not more than 20°C above ambient temperature, unless stated differently. Assumes a good basic standard of occupational hygiene is implemented.
<table>

Environmental Release Category
ERC7 - Industrial use of substances in closed systems

Specific Environmental Release Category
ESVOC SpERC 7.12a.v1.

Processes, tasks, activities covered
Covers the use as a fuel (or fuel additives and additive components) within closed or contained systems, including incidental exposures during activities associated with its transfer, use, equipment maintenance and handling of waste.

2. Operational conditions and risk management measures

2.1. Control of environmental exposure

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Fraction of EU tonnage used in region: 0.1
Regional use tonnage (tonnes/year): 1.1E+7
Fraction of Regional tonnage used locally: 1.4E-1
Annual site tonnage (tonnes/year): 1.5E+6
Maximum daily site tonnage (kg/day): 5.0E+6

Frequency and duration of use Continuous release
Emission Days (days/year): 300

Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Release fraction to air from process (initial release prior to RMM): 7.0E-4
Release fraction to wastewater from process (initial release prior to RMM): 4.4E-7
Release fraction to soil from process (initial release prior to RMM): 0

Technical conditions and measures at process level to prevent release
Common practices vary across sites thus conservative process release estimates used.

Technical onsite conditions and measures to reduce or limit discharges, air emissions and releases to soil
Risk from environmental exposure is driven by freshwater sediment
Onsite wastewater treatment required
Prevent discharge of undissolved substance to or recover from onsite wastewater

Treat air emission to provide a typical removal efficiency of (%): 95
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency of (%) ≥ 87.7
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of (%) ≥ 0
Organizational measures to prevent/limit release from the site
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Estimated substance removal from wastewater via domestic sewage treatment (%): 88.8
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%): 88.8
Maximum allowable site tonnage (MSafe) (kg/d): 5.2E+6
Assumed domestic sewage treatment plant flow (m3/d): 2000

Conditions and measures related to external treatment of waste for disposal
Combustion emissions limited by required exhaust emission controls. Combustion emissions considered in regional exposure assessment.

Conditions and measures related to external recovery of waste
This substance is consumed during use and no waste of the substance is generated.

Remarks
Additional information on the basis for the allocation of the identified OCs (operating conditions) and RMMs (Risk Management Measures) is contained in Petrorisk file

2.2. Control of exposure - Workers / Consumers

Product characteristics
Physical State
Liquid, vapor pressure < 0.5 kPa at STP

Concentration of substance in product
 Covers percentage substance in the product up to 100 % (unless stated differently).

Frequency and duration of use
